HOUSEHOLDER ENERGY ADVICE - SUFFOLK HOME CASE STUDY

Resident of detached house in rural East Suffolk
'Completing the home energy audit survey really helped us to focus on the heat loss that was happening around our home. The survey was then reviewed by the Groundwork experts and they provided helpful information on switching to solar PV and heat pump options. We are very rural and rely on wood burners and oil to provide heating and hot water and we now feel more confident to invest in greener technology to improve our house over time. Also, immediate quick fix options to prevent draughts and improve loft insulation were also presented to us'
